See Up Close...Far Away...and In-Between

You turned 40...and you're struggling to see your phone and the restaurant menu...

You probably have **presbyopia: an age-related eye condition that affects everyone over the age of 40**, even those who never needed vision correction before.

Presbyopia is caused by a loss of elasticity within the natural lens of the eye that makes it more difficult for the eye to focus up close. This ultimately results in *blurred near vision*, and perhaps these other typical Presbyopic Problems:

- “Long Arm Syndrome” – you just can’t hold your phone far enough away to be able to read it!
- Reaching for Readers more often than you would like!

Finding a vision correction solution for these presbyopic problems can be even more challenging if you have astigmatism.

Fortunately, there is a great solution in Duette Progressive!

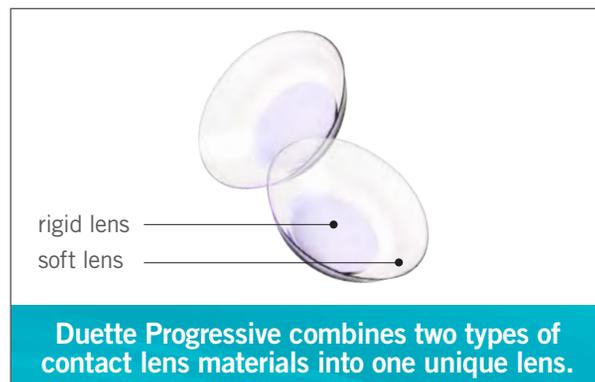

Duette
PROGRESSIVE
CONTACT LENSES

Transform your vision with Duette Progressive

With Duette Progressive you can call or text effortlessly. Enjoy a good read. And bring the distance into focus. All at the same time!

Duette Progressive is an advanced technology contact lens, designed for people who are looking for ways to see their best, *even if they have astigmatism!*

The center of the lens is made of a rigid material to give you great, stable vision. The soft skirt keeps the lenses comfortable throughout the day.

No other contact lens uses the dual material design to provide clear vision and comfort in a single lens.

Plus, Duette Progressive lenses are personalized for your eyes to give you the great vision you deserve.

Is Duette Progressive right for you?

1. Have you tried soft multifocal contacts and wished your vision was clearer?

Duette Progressive gives you clear vision up close, far away and everywhere in between! Duette lenses utilize hybrid technology featuring a rigid center for clear optics, while the soft outer skirt keeps the lenses comfortable all day.

2. Do you wear progressive glasses and want to try contact lenses?

Duette Progressive gives you great vision at all distances...just like your progressive glasses. The lens has a range of powers from near to distance to enable you to see up close, far away and everywhere in between. Unlike progressive glasses, Duette Progressive lenses do not require you to tilt your head to find the right spot for seeing at different distances.

3. Are you tired of reaching for reading glasses?

Duette Progressive can eliminate your need for reading glasses for most tasks! That's because the lens has powers from near to distance, all in one!

4. Are you wearing monovision and experiencing a lack of depth perception?

Duette Progressive lenses correct both eyes for near and distance, so you enjoy true binocular vision that doesn't compromise your depth perception.

5. Do you wear "hard" multifocal lenses and want a more comfortable lens?

Duette Progressive gives you both the comfort and wearability of a soft lens and the crisp optics of a rigid lens.

Get the conversation started with your doctor by answering these questions:

1. On a scale of 1 to 5, how satisfied are you with your current method of vision correction? (5 = Completely Satisfied)

1	2	3	4	5
---	---	---	---	---

2. What would you like to change about your current method of vision correction?

- I want to see better up close
- I want to see better in the distance
- I want to see my computer screen better
- I want to see better at night
- I wish my vision didn't go in and out of focus
- I wish my contact lenses were more comfortable
- I wish I didn't have to wear reading glasses
- Other _____

3. How do you feel about wearing glasses?

- I would prefer to never wear glasses again
- I would prefer to be without glasses most of the time
- I don't mind wearing glasses some of the time
- I prefer wearing glasses over contact lenses

4. What do you hope to gain from wearing Duette Progressive?

What to expect from Duette Progressive...

If Duette Progressive is right for you, your doctor will order the lenses based on the measurements of your eye. Your personalized lenses will be delivered to your doctor's office within several days. Your doctor may need to make slight adjustments to your prescription to optimize the fit of the lens and your vision at all distances.

Adapting to Duette Progressive

Duette Progressive contact lenses allow light rays from all distances to enter your pupil and focus on the retina simultaneously. As with any progressive lens, your brain must learn to select the desired image at the proper time, which usually takes one to two weeks. Your vision will improve as you wear the lenses and give your brain the opportunity to adapt.

Duette Progressive lenses are designed for all day comfort, but you may expect a period of mild lens awareness when you begin wearing the lenses. This typically goes away within a few days.

Duette Progressive contact lenses allow you to see the world up close, far away and everywhere in-between.
